Effective	September 2018
Replaces	December 2012

Translation of the
original instructions

Pump AG H

INSTALLATION

OPERATION

MAINTENANCE

WARRANTY :

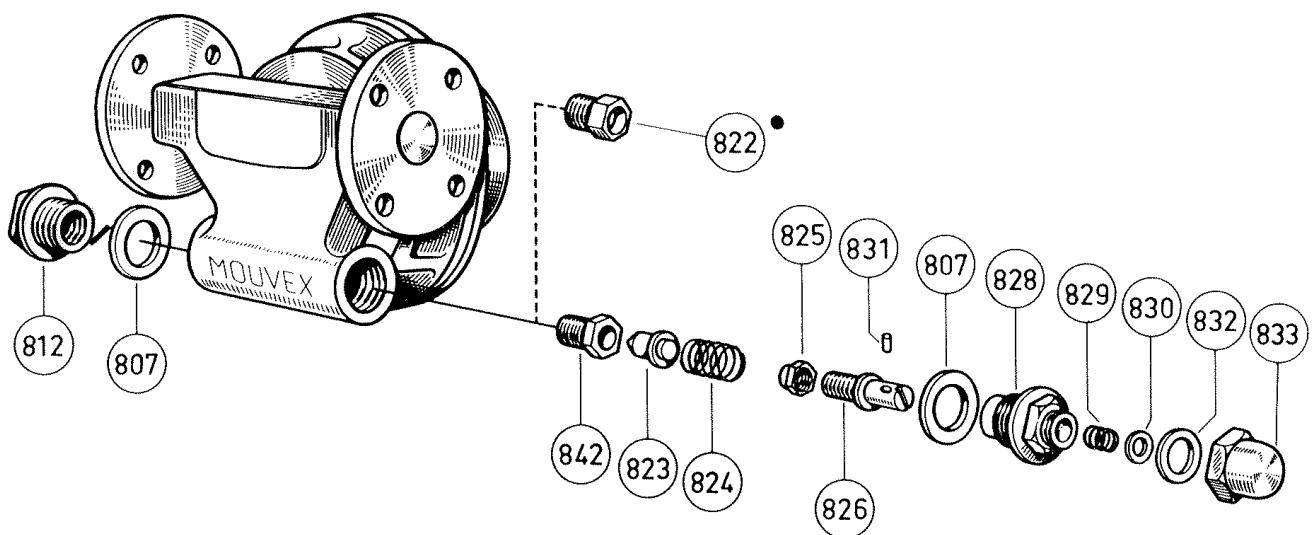

TM Series pumps are covered 24 months by warranty within the limits mentioned in our General Sales Conditions. In case of a use other than that mentioned in the Instructions manual, and without preliminary agreement of MOUVEUX, warranty will be canceled.

Your distributor :

INSTALLATION

- In compensated bypass, special seat 822 substituted to standard 842.

Rotation

MOUVEX pump is reversible. Suction and discharge ends are bound to rotation as indicated on plate fixed to pump.

Bypass orientation

Functioning

Acting as a relief valve, the MOUVEX bypass protects pump and auxiliary equipment from damage due to excessive pressures that may be built up when the pump runs against some obstruction in the discharge piping.

When discharge pressure reaches the pressure limit for which the bypass is set, the valve opens and thus allows the liquid to be circulated from the suction side back to the suction side.

Orientation

The bypass protects the pump in one direction of rotation only. Therefore make sure it is rightly installed by checking that bypass cap is on the suction side and reverse bypass if necessary.

Reversing

Remove adaptor 828 and parts coming with it.

Remove valve 823, spring 824 and fit those parts on the opposite side.

Fit plug 812 and gasket 807 in the place of nut 828.

(in special low-pressure bypass, seat 822 must be reversed).

Motor protection

As the bypass protects the pump only, electric motors should be equipped with their own protection device.

OPERATION

Pressure setting

To set bypass, remove cap 833.

To increase pressure setting, turn adjusting nut 826 clockwise.

To reduce pressure setting, turn the nut counterclockwise.

Replace cap 833.

After making sure that the rotation speed is correct, tighten adjusting screw 826.

Should the spring be completely tightened or the motor operation disturbed, without getting the delivery wanted, it would mean that unit should operate at a higher pressure than the pressure for which it has been designed. Please report to our Technical Department.

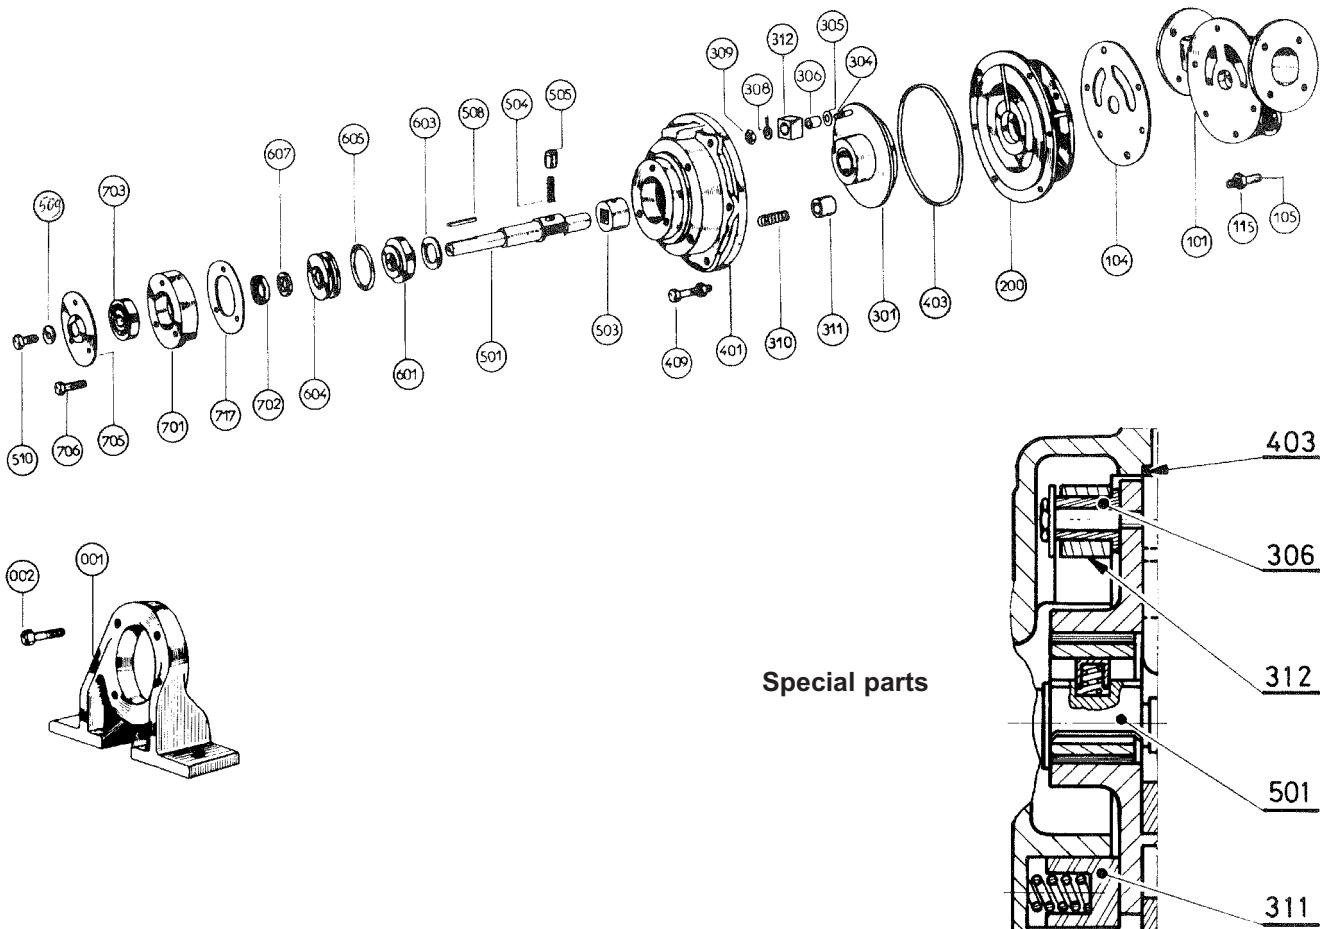

Delivery adjustment

When the pump does not deliver the proper flowrate, the trouble may come from bypass spring not being adjusted at the correct pressure setting.

Standard bypass use

Standard bypass should not be operated too frequently - even less permanently - since it would result in useless power consumption and material fatigue detrimental to equipment life.

DISASSEMBLY / REASSEMBLY

Disassembly

To remove head and piston

Remove head bolts 409.

Remove end-plate 401 by prying it loose.

Using a screwdriver as a lever, back piston 301 away from pump and remove it.

To remove shaft seal and shaft

Refer to § SHAFT SEAL.

Reassembly

Before assembling pump in the reverse order, check the following points :

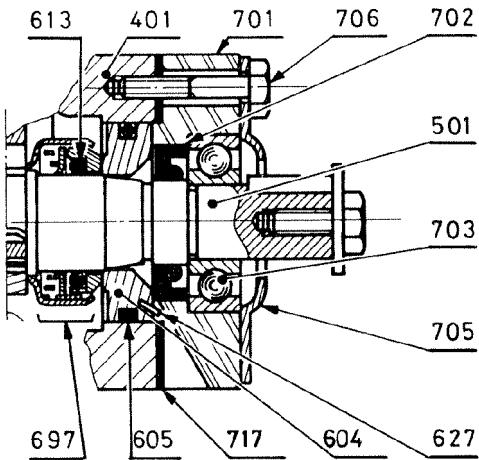

- spring 504 of piston bearing has not weakened (18 mm mini).
- piston backsprings 310 (22,5 mm mini) have not weakened.

Replace shaft and shaft seal (see § SHAFT SEAL).

Before refitting end-plate, do not forget to refit gasket 403 after making sure it is in good condition.

SHAFT SEAL

BLOCDIR SHAFT SEAL AG H

Operation

Shaft 501 rotates monobloc assembly 697 by 2 notches on the shaft that mesh with 2 tabs on the rotating assembly.

Counterpart 604 is held solid with the pump body by seal 605 and stop 627.

Sealing is ensured :

- 1) On the shaft, by seal of monobloc rotating assembly 697.
- 2) By the contact surface against monobloc rotating assembly 697 and immobile counterpart 604.
- 3) In the bore of bottom 401 by seal 605 that is tight against the bottom and fixed counterpart 604.

Sealing therefore depends on the condition of the contact surfaces and on the seals.

Disassembly

After opening the pump :

- remove the 3 screws 706, cover 705 and remove cage 701 with the shaft, the bearing and all the parts forming the shaft seal.
- drive the shaft out of the bearing by tapping slightly on the shaft end on the drive side and withdraw assemblies 701, 703 and 702, 717.
- then remove 604, 605 and monobloc rotating assemblies 697.

Reassembly

Check condition of seals 605 and 717 and of rotating monobloc 697.

Check that the contact surfaces of counterpart 604 and monobloc assembly 697 are flat and polished.

- Reassembly all the parts on the shaft in reverse order of disassembly.
- Ensure that the 2 tabs of monobloc rotating assemblies 697 mesh with the notches of shaft 601.
- Ensure that stop 627 of counterpart 604 enters the leak port of bearing cage 701.
- Take care not to damage lip seal 702.
- Replace the shaft, bearing and shaft seal assembly on the pump, taking care to place the leak discharge orifice at the bottom and then fit cover 705 and the 3 screws 706.

STORAGE

If necessary, refer to § DISASSEMBLY / REASSEMBLY for pump disassembly.

Short duration (≤ 1 month)

 WARNING	
	IF PUMPING HAZARDOUS OR TOXIC FLUIDS, THE SYSTEM MUST BE FLUSHED PRIOR TO PERFORMING ANY SERVICE OPERATION.
Toxic or hazardous fluids can cause serious injury.	

MOUVEX pumps and motor-driven pumps are well lubricated when delivered to protect the internal parts during brief storage in a building where :

- the temperature remains between 10°C and 50°C.
- the relative humidity does not exceed 60%.
- exposure to vibration is limited.
- pump is stored in an area sheltered from bad weather and sun.

Long duration (> 1 month)

The recommendations from the manufacturer should be followed if the pump is stored with its gear motor.

Pump ports should be filled with a non-corrosive liquid that is compatible with the pump components in order to prevent corrosion.

Unpainted external surfaces of the pump (e.g. shafts, couplings, etc.) should be covered in some form of anti-corrosion protection.

The bearing should be well greased. If the pump is to be stored for more than the life of the grease, this one should be replaced in time to prevent an excessive degradation of its qualities.

The best storage conditions are inside a building that meets the conditions set out above.

If inside storage is not possible, the materials should be covered to prevent direct exposure to sun and bad weather. This protection should also prevent condensation.

The pump should be turned a few revolutions manually every two months.

Restarting

Follow the standard start-up procedure for the pump/motor-driven pump, as well as the instructions below.

Turn the pump by hand to make sure the parts move freely.

Replace the grease used to lubricate the bearing.

If the pump has a safety bypass, remove it and inspect the parts and make sure they move freely (see § BYPASS for removal instructions).

SCRAPPING

The pump must be scrapped in compliance with the regulations in force.

During this operation, particular care must be paid to the drainage stages of the pump.

DECLARATION UE DE CONFORMITE CE

EU CERTIFICATE OF CONFORMITY – EU KONFORMITÄTSERKLÄRUNG

MOUVEX sas, ZI La Plaine des Isles – 2 Rue des Caillottes – 89000 Auxerre France, déclare que l'équipement suivant / declares the following equipment / erklärt, dass folgende Ausrüstung:

Modèle :

Designation / Bezeichnung

Pour la Sté MOUVEX sas, fait à Auxerre le : _____

Certification ATEX délivrée par INERIS*, Organisme Certificateur, et portant le marquage suivant : (C)

II – G – II – T – Temp Max produit pompé /Max Temp Flow / Max Temp Medium = _____ °C (X = voir notice / see IOM / siehe Handbuch)

L'équipement désigné ci-dessus doit impérativement respecter les conditions d'utilisation ATEX décrites dans nos notices d'instruction. Il doit être employé conformément à l'utilisation qui en a été prévue de par sa conception et sa fabrication, et conformément aux normes en vigueur. Nous, soussignés, déclarons que l'équipement concerné est conforme aux Directives listées ci-dessus et aux normes applicables s'y rapportant.

The equipment indicated above must imperatively comply with the ATEX conditions of use described in our instruction book. It must be used according to the foreseen use by its design and its manufacturing, and according to the current standards.

We, undersigned, declare that the concerned equipment is in conformity with the Directives listed above and in the applicable standards in force.

Oben stehend bezeichnete Ausrüstung muss unbedingt den in unseren Betriebsanleitungen beschriebenen Anwendungsbedingungen entsprechen. Sie ist entsprechend dem durch Konstruktion und Fabrikation vorgesehenen Verwendungszweck und entsprechend den geltenden Normen einzusetzen.

Die Unterzeichner erklären, dass die bezeichnete Ausrüstung den oben aufgeführten Richtlinien und den diesbezüglich geltenden Normen entspricht.

den Bestimmungen der nachstehenden Richtlinien entspricht:

□ „Maschinen-Richtlinie“ 2006/42/EEC wie umgesetzt im nationalen Recht hinsichtlich der Ausrüstungssicherheit und Sicherheitsvorkehrungen auf mechanische und elektrische Risiken, die für rotierende Maschinen gelten.

□ „ATEX“ Richtlinie 2014/34/EU (26. Feb. 2014), wie umgesetzt im nationalen Recht in Bezug auf Ausrüstungen für den Einsatz in explosionsgefährdet Atmosphäre. Die Konformität hat Geltung durch Anwendung folgender Normen:

NF EN 809:2009 NF EN 13463-1:2009 NF EN 13463-5:2009

Die ATEX-Zertifizierung wurde von der benannten Stelle (NERIS*) erteilt, und mit folgender Kennzeichnung: (C)
